

△ **FROGSPAWN**
The red-eyed tree frog's eggs are laid on a leaf hanging over a pond or a stream. When the tadpoles emerge, they fall into the water below.

◁ **MATING PAIR**
The male clambers on to the female's back to mate. Mating takes several hours, with the smaller male clinging to the female as she searches for places to lay her eggs.

Red-eyed tree frogs can **lighten and darken their skin color** for camouflage or to **signal a change in mood**
