

Fluorine

9
F

The most reactive non-metal of all, this pale yellow gas can form compounds with almost every element on the periodic table. Compounds containing fluorine are used in toothpaste, non-stick pans, and waterproof clothing.

ATOMIC MASS 18.998**STATE** Gas**DISCOVERY** 1886
(Henri Moissan)

Pure fluorine gas can burn its way through almost anything, including metals and concrete.

**Crystals of
fluorite, an
ore of fluorine**
