

Lithium

3
Li

The main natural source of lithium is the thick layer of salt left over from when ancient lakes and seas dried out. This alkali metal is used to make long-lasting batteries inside mobile phones and electric cars.

ATOMIC MASS 6.94**STATE** Solid**DISCOVERY** 1817 (Johan August Arfvedson)

Purple crystals in this rock contain lepidolite, an ore of lithium

Lithium is the lightest of all metals; it will float on water even as it reacts with it.
