

CONTENTS

- 4 What is an element?
- 8 Inside an atom
- 12 Grouping the elements
- 14 Periodic table

16 HYDROGEN

- 18 Hydrogen

20 ALKALI METALS

- 24 Lithium, Sodium, Potassium
- 28 Rubidium, Caesium, Francium

30 ALKALINE EARTH METALS

- 34 Beryllium, Magnesium, Calcium
- 36 Strontium, Barium, Radium

38 TRANSITION METALS

- 42 Scandium, Titanium
- 44 Vanadium, Chromium, Manganese
- 46 Iron, Cobalt
- 50 Nickel, Copper, Zinc
- 52 Yttrium, Zirconium, Niobium, Molybdenum
- 54 Technetium, Ruthenium, Palladium, Rhodium
- 56 Silver, Cadmium, Hafnium
- 58 Tantalum, Tungsten, Rhenium, Iridium, Osmium
- 60 Platinum, Gold
- 64 Mercury, Rutherfordium, Dubnium, Seaborgium
- 66 Bohrium, Hassium, Meitnerium, Darmstadtium, Roentgenium, Copernicium

68 LANTHANIDES

- 72 Lanthanum, Cerium, Praseodymium
- 74 Neodymium, Promethium, Europium, Samarium, Gadolinium
- 76 Terbium, Dysprosium, Holmium
- 78 Thulium, Erbium, Lutetium, Ytterbium

80 ACTINIDES

- 84 Actinium, Thorium, Protactinium
- 86 Uranium, Neptunium, Plutonium
- 88 Americium, Berkelium, Einsteinium, Curium, Californium
- 90 Fermium, Mendelevium, Nobelium, Lawrencium

92 BORON GROUP

- 96 Boron, Aluminium
- 98 Gallium, Indium, Thallium, Nihonium

100 CARBON GROUP

- 104 Carbon, Silicon
- 108 Germanium, Flerovium, Tin, Lead

110 NITROGEN GROUP

- 114 Nitrogen
- 116 Phosphorus, Arsenic
- 118 Antimony, Bismuth, Moscovium

120 OXYGEN GROUP

- 124 Oxygen, Sulfur
- 128 Selenium, Tellurium, Polonium, Livermorium

130 HALOGEN GROUP

- 134 Fluorine, Chlorine, Bromine
- 136 Iodine, Tennessine, Astatine

138 NOBLE GASES

- 142 Helium, Neon, Argon
- 144 Krypton, Xenon, Radon, Oganesson

- 146 Fascinating facts
- 148 What's in a name?
- 150 Glossary
- 152 Index
- 156 Acknowledgments

ATOMIC MASS: The relative atomic mass of an element. This is the average of the atomic masses of all the forms of an element. In cases where the relative atomic mass is not known, the atomic mass of an element's most stable form is given within brackets.

STATE: The state of an element at 20°C (68°F).

DISCOVERY: The year in which an element was discovered, along with the names of the discoverers. When different people have discovered an element separately, individual dates are given for each discoverer.
