

Rhodium

45
Rh

The element rhodium is one of the rarest elements of all. The total annual production of rhodium across the world is a mere 30 tonnes. This shiny metal is used in a car's catalytic converter, a device that removes poisonous gases from the exhaust fumes.

The sand on the banks of the Ural River in Central Asia is a major source of rhodium.

The mineral forms as golden needles.

Golden crystals of millerite, an ore of rhodium
