Fermium

This artificial element was named after the Italian scientist **Enrico Fermi**. He built the first nuclear reactor in 1942, starting the American effort to build nuclear weapons during World War II. Fermium was first identified in the debris of an atom bomb test in 1953. This unstable element has no known uses beyond research.

Some scientists call Enrico Fermi the "father of the atomic age".

Mendelevium

Dmitri Mendeleev

Mendeleev's periodic table

Mendeleev's notes from 1869 show his method of arranging elements in columns and rows.

Mendelevium is named after the Russian chemist Dmitri Mendeleev, who invented the periodic table. Mendelevium is produced in very small amounts by firing parts of helium atoms at einsteinium atoms in a particle accelerator (a machine in which atoms are smashed together).
