Germanium

● 32 ● 32 ● 41

State: Solid
Discovery: 1886

Forms

This sulfur mineral is rich in germanium.

Germanite

The pure form is shiny like a metal, but brittle.

Disc of pure germanium refined in a laboratory

Uses

Camera lens

The germanium oxide in the glass of this lens bends surrounding light from a large area into the camera.

Smartphone microchip

This microchip is made of silicon and germanium.

Germanium is found in the **atmosphere of Jupiter.**

This car contains a germanium-based sensor that measures its distance from obstacles.

Car with germanium sensor

This semi-metal is named after the country Germany. It was discovered there in 1886 by chemist Clemens A Winkler, nearly 20 years after Russian chemist Dmitri Mendeleev predicted its existence and properties. **Germanite** is a mineral rich in germanium,

but this element is mainly extracted from the ores of silver, copper, and lead. One of its compounds, germanium oxide, is used in wide-angle **camera lenses**. It is also used in some **microchips** and in a number of **car sensors** that aid in navigation.
