State: Solid
Discovery: 2000

The Oxygen Group

Heavy ion cyclotron,
Joint Institute of Nuclear Research, Dubna, Russia

Livermorium
has been
named
after this
laboratory.

Lawrence Livermore National Laboratory, California, USA

When livermorium atoms were first produced in 2000, they broke apart in a fraction of a second. The first successful attempt to create atoms of this element was made at the **Joint Institute of Nuclear Research** at Dubna, Russia. The team worked

with material provided by the **Lawrence Livermore National Laboratory** in California, USA. This highly radioactive element was produced by firing calcium atoms at curium atoms in a particle accelerator (a machine in which atoms are smashed together).
