

OXYGEN IS VITAL FOR LIFE. THE RESPIRATORY SYSTEM TRANSFERS OXYGEN FROM THE AIR TO THE BLOOD, SO THE CARDIOVASCULAR SYSTEM CAN DISTRIBUTE IT, WHILE THE MUSCULAR AND SKELETAL SYSTEMS DRIVE THE MOVEMENTS OF BREATHING. THE AIR IS OFTEN CONTAMINATED WITH DUST PARTICLES, HARMFUL MICROBES, ALLERGENS, IRRITANTS, AND CANCER-CAUSING CHEMICALS. ALL OF THESE CAN DAMAGE THE SYSTEM'S DELICATE PARTS, MAKING RESPIRATORY DISORDERS AMONG THE MOST COMMON ILLNESSES.
