

IN SOME WAYS, THE HUMAN BRAIN RESEMBLES A COMPUTER. BUT IN ADDITION TO LOGICAL PROCESSING, IT IS CAPABLE OF COMPLEX DEVELOPMENT, LEARNING, SELF-AWARENESS, EMOTION, AND CREATIVITY. EVERY SECOND, MILLIONS OF CHEMICAL AND ELECTRICAL SIGNALS TRAVEL AROUND THE BRAIN AND THE BODY'S INTRICATE NERVE NETWORK. NERVOUS TISSUE IS DELICATE, AND NEEDS PHYSICAL PROTECTION AND A RELIABLE BLOOD SUPPLY. IF NERVES ARE DAMAGED, REPAIR MAY BE PAINSTAKINGLY SLOW OR IMPOSSIBLE.
