

The dots that will form the eyes are clearly visible now. At the side of the head, the deep cleft can be seen between the front and back of the brain; this is normal at this stage.

EATING FISH

Fish really is brain food! Fish contains iodine (see [Ask a nutritionist](#)) as well as omega-3 fatty acids, which are essential for your baby's developing brain. Make sure you eat some fish every week, but be aware of the precautions you need to take with some varieties (see [Know your fish](#)).

ASK A DOCTOR

I'm eight weeks pregnant and have had some bleeding. Should I be concerned? If the bleeding is light, and there are no abdominal cramps or pain, then it's unlikely that there is anything wrong. However, consult your doctor if you have bleeding at any stage of pregnancy to rule out any complications.

Bleeding in early pregnancy can sometimes be due to a cervical ectropion, which is when the surface of the cervix becomes more delicate. This results from hormonal changes and is not harmful to the baby. A cervical ectropion can be aggravated by having sex.

Bleeding in late pregnancy may be more serious as it can mean there is placental abruption, when the placenta detaches from the wall of the uterus, or be due to a [low-lying placenta](#). A mucus discharge tinged with blood in late pregnancy may be a ["show."](#)
