

Exercising safely

Staying fit in pregnancy has many benefits for you and your baby and increases your stamina for labor and birth.

If you had an exercise program before you became pregnant, you can continue with this in the first trimester as long as you have the all clear from your doctor. As your pregnancy goes on, you may need to adapt your program.

If you didn't have a regular exercise program before, now is the ideal time to adopt a new, healthier way of life from which you will reap the rewards for years to come. If you do start exercising now, build up gently; listen to your body and do only what feels comfortable.

Regular gentle exercise is much better than intense irregular bouts of exercise (which aren't advisable in pregnancy), since your body responds more positively to consistent, moderate exercise.

Stay well hydrated by sipping water before, during, and after your workout.
