

YOU ARE **10 WEEKS AND 3 DAYS**
207 days to go

YOUR BABY TODAY

This color 2-D ultrasound scan shows a baby lying on its back with its head to the right. This is the ideal position when measuring the crown (head) to rump (bottom) length to accurately date the pregnancy: it simply measures in a straight line.

“You may begin to notice some discomfort around your pelvis as your body begins to accommodate your growing uterus.”

Having a few minor aches and pains during pregnancy is nothing to be concerned about. They occur because the ligaments and muscles of your pelvis are stretching to fit your ever-growing uterus. This can cause some discomfort but should not be painful.

If you're experiencing cramplike period pain, and there is any bleeding, or if the pain becomes very severe and constant, then you should go to the doctor or the hospital to be checked. You will be examined to rule out a [miscarriage](#) or [ectopic pregnancy](#).

SAFETY WHILE TRAVELING

When traveling, it's important to be prepared (see also [Traveling in pregnancy](#)):

- **Check that you're healthy enough to travel**—speak to your doctor.
- **Find out whether you need any vaccinations** and discuss these with your [doctor](#). It's advisable to avoid traveling to areas where there is a high risk of disease.
- **Get travel insurance** and make sure it covers you during pregnancy.
- **Carry your prenatal records** with you at all times and stay within reach of medical help.
- **Don't stay seated** for long periods in transit and stay hydrated. Wear support socks to reduce the risk of [DVT](#) (see [Ask a doctor](#)).
- **Wear adequate sun protection** if you're going to a hot climate.
- **Be careful** about what you eat and drink bottled water.
- **Avoid eating street food** since it may put you at risk of food poisoning.

ASK A NUTRITIONIST

I'm intolerant to dairy products. What can I eat to make sure my baby gets the nutrients these provide? Dairy products are an excellent source of protein, calcium, and phosphorus—these are all essential nutrients that are required for the development of your baby's teeth and bones—riboflavin (vitamin B2), which helps with the production of energy; and iodine (see [Ask a](#)
