

Changes to your center of gravity due to the increased size of your belly can increase the chances of stumbling, risking injury to you and your baby.

The following activities are best avoided during your second (and third) trimesters of pregnancy:

- Vigorous exercise at a high altitude (unless you are used to it)
- Diving and scuba diving
- Road or mountain bicycling
- Rock climbing
- Skiing, snowboarding, and waterskiing
- Ice skating/ice hockey
- Horse riding
- Bungee-jumping!
