

The placenta undergoes a new wave of development to meet all your baby's needs.

The thyroid gland is working, using iodine transported from your body via the placenta.

The neck is lengthening and the baby can raise his head further, lifting up his chin from his chest.

The arms have grown long enough to allow the baby to place his hands together in front of his face.

The fully formed spinal cord now extends the entire length of the vertebral canal, with nerves leaving between every vertebra.

At 15 weeks the average crown to rump length is 4 in (10.1 cm) and the average weight is 2.5 oz (70 g).
