

YOU ARE **14 WEEKS AND 1 DAY**
181 days to go

YOUR BABY TODAY

At this stage, the fetus's forearms, wrists, hands, and fingers are all well differentiated. The eyes, which are visible as dark areas behind the sealed eyelids, have migrated inward from the sides of the head.

“Now that some pregnancy discomforts have passed and while you await your baby you may feel strangely “normal.” ”

You may not feel as though you are pregnant at the moment. The beginning of the second trimester is an interesting transition period: you know you're expecting a baby—you've seen the ultrasound scan—but you may not look or feel that pregnant, and you won't feel the baby move for several weeks yet (see [You are 19 weeks and 3 days](#)).

The physical reminders that were common in the first trimester—such as nausea and fatigue—may have greatly lessened or passed entirely. Many women say they feel completely normal, as they did before they were pregnant, and find this strange because they think that they “should” be feeling something. Try to enjoy this time and keep looking at that scan picture if you need a reminder that your baby is there. You may long to feel normal again once you hit the third trimester and some of that fatigue returns.

FOCUS ON PARTNERS

Make the effort to set aside time The two of you for you and your partner to be alone together. Whether it's an evening out once a week, or that weekend away you've been promising yourselves—do it now! Remember, the second trimester is also a good time to go on vacation (see [Enjoy a healthy vacation](#)).

It's common for there to be fundamental changes to a relationship when a baby arrives as you adapt to being parents. By spending time together now, you will build a greater bond for when the baby is born and feel satisfied that you enjoyed lots of pleasant time together during the pregnancy.

THE POWER OF OMEGA-3

Omega-3 fatty acids are essential and only obtained through what we eat—the main source is seafood, but they are also found in algae. DHA and EPA are needed to help the development of the baby's eyes, brain, and nervous system. In the last trimester your baby's brain is growing
