

- **Keep your movements slow** and controlled, and stay in your comfort zone. The increased flexibility of your muscles and tendons could result in overstretching during activities such as yoga or Pilates, or fast movements in a dance class or weight training.

Relaxin is also responsible for the relaxation of the circulatory system: the walls of the veins are relaxed, which sometimes results in [varicose veins](#). Doing cardiovascular exercise will help increase blood flow and can reduce the occurrence of varicose veins.
