

**You may want to join online forums to share your pregnancy experience**, but be aware of taking health advice from other parents-to-be. Your doctor is the best source of information.

---

## COMPUTER USE

**There is no significant radiation** from a computer or tablet that can affect an unborn baby. For this reason, they aren't harmful to use during a pregnancy.

---

## ASK A DOCTOR

**Are there risks if I gain too much weight?** If you gain a lot of weight in pregnancy it can be harder to shift it after the birth, so it's good to remember that you're not eating for two.

If you started pregnancy overweight or have gained a lot of weight, you may be more likely to experience health complications, such as developing [gestational diabetes](#), hypertension, and [preeclampsia](#), and [deep-vein thrombosis \(DVT\)](#).

However, all these conditions can be managed so you shouldn't worry unnecessarily. Most women who are overweight have a straightforward pregnancy and give birth to a healthy baby.
