

YOU ARE **19 WEEKS AND 4 DAYS**

143 days to go

YOUR BABY TODAY

The appearance of your baby's head is still dominated by a prominent forehead due to the rapidly growing brain. The jaw can seem small but as the tooth buds grow and expand within the jaw, it lengthens and changes proportion.

“The foundations are already laid for your baby's teeth—both the baby teeth and the permanent ones that will follow.”

Although it's very rare for any teeth to have come through by birth (only a 1 in 3,000 chance), your baby's tooth buds that will form the teeth are already in place within the jawbone.

All of the teeth—both the baby teeth and the underlying permanent teeth—start their development beneath the gums while the baby is developing in the uterus. The baby teeth buds began to develop at eight weeks of pregnancy and by this week all of the buds are formed.

The first baby teeth to harden, as calcium builds up, are the central incisor teeth and the last are the back molars, at around 19 weeks. The crown of each baby tooth does not complete development until after birth and root completion takes until your child is more than three years old.

Buds for the permanent teeth begin to form between the 14th and 20th weeks. These lie deeper than those for the baby teeth and closer to the inner edge of the jaw and gum. They remain dormant until it is time for the baby teeth to be lost.

Your baby's baby teeth will start coming through at around six to eight months and she'll have a complete set of baby teeth by the age of 2½.

FEELING FLEXIBLE

Being flexible enables your muscles to work more efficiently, alleviates tightness, helps prevent cramping, and leads to improved balance and posture. Stretching can also help you feel confident and calm, especially if the exercises are combined with deep breathing.

Flexibility can be maintained or improved during pregnancy by doing a series of exercises that stretch your muscles in a safe and effective way.

- **Do not stretch further** than feels comfortable or you risk injuring the muscles and stressing your joints.
- **Ensure that you're stretching** when the muscles are warm, at the end of a workout or after a warm bath.
