

moves, as well as the type of movement and when it happens, are relevant since these indicate that the placenta is sustaining the pregnancy and your baby is healthy.

If you're concerned about lack of movement from your baby at any stage of your pregnancy, speak to your midwife or contact your maternity unit as soon as you become concerned.

SITTING CORRECTLY

Good posture can help to minimize pregnancy discomforts, including [backaches](#). When seated, make sure your lower back is supported by the back of the chair or a pillow. Keep your feet flat on the floor (see image).

Consider doing pregnancy yoga—it is a great way to learn to keep your spine aligned and your lower back supported.
