

- **Heart rate:** FHH is fetal heart heard; FHHR is heard and regular; FMF or FMNF—fetal movements felt or not felt.
- **Your baby's position in the uterus** is usually referred to as the presenting part or lie and there are several terms and abbreviations used to describe this (see [Lie and presentation](#)). Most babies will be in the correct position by 34 weeks. Your doctor will check your baby's position at around 36 weeks to ensure that they are vertex, also known as cephalic, or head presenting first in the pelvis. If your baby is positioned breech or transverse, then your doctor may discuss turning your baby so that you can have a vaginal delivery.
