

The toes are often grabbed by the baby's hand and may even be brought up to her mouth.

All the nerve cells that make up the outer surface of the brain are in place. They will gradually branch out to form neural connections.

Hand coordination is improving and your baby often brings her hands to her face, and especially her mouth.

Your baby's body is very flexible and she can double herself up with ease. As she gets bigger, her movements become stronger.

At 26 weeks the average crown to heel length is 14 in (35.6 cm) and the average weight is 1.7 lb (760 g).
