

YOU ARE **29 WEEKS AND 5 DAYS**

72 days to go

YOUR BABY TODAY

The lip shape and groove between the nose and upper lip are particularly well shown here. If you or your partner has a prominent groove, or philtrum, above the upper lip, your baby may too, or may inherit characteristics that are somewhere in between.

“Regardless of your size—and your baby’s—nature won’t let them grow too large for you to be able to give birth.”

The size of your hips is not always a good indication of the size of your pelvis, so having narrow hips doesn’t mean you’ll have a difficult birth, and having larger “child-bearing” hips doesn’t mean you’ll have an easy birth.

Your baby’s growth and development is determined genetically, although women do have an extra influence on the size of their babies while they are in the uterus. So, even if your child ends up being tall, if you’re small you’ll limit how big they develop in utero. If you’re small, you may not be able to deliver a hefty baby, so your body limits the baby’s size at delivery. Your baby will then catch up on their expected growth after the birth.

There’s a condition called cephalo-pelvic disproportion in which the baby is too big or the pelvis is too small for the baby to engage. You’ll only know for sure whether your baby will pass through the birth canal when you’re in labor.
