

FOCUS ON TWINS

You're more likely to deliver twins by Cesarean. Many of these are scheduled, meaning the decision is made in advance, and the mother doesn't go into labor. It is a major surgery, but for the babies it's often the best way to arrive and the small risk for the mother is worth the benefit..

A vaginal birth can be complicated for twins, especially for the second twin, who may develop complications after the birth of the first twin and require urgent delivery.
