

The follicle lies below the surface of the ovarian wall and protrudes just prior to ovulation. The follicle is most likely to rupture and release an egg midcycle.

THE MALE BIOLOGICAL CLOCK?

Although men can continue to make sperm throughout their lifetime, changes in the amount and characteristic of sperm as men age does also result in decreased fertility. Although data is limited, advanced paternal age seems to be associated with an increased risk of Down Syndrome, autism spectrum disorder, as well as other psychiatric disorders and some birth defects.
