

FLYING TRAIN

The cars of the world's oldest suspended monorail have been gliding 40 ft (12m) above the traffic, crowded streets, and river of Wuppertal, Germany, since 1901. The 8.3 mile- (13.3km-) long track, slung beneath a towering iron structure, provides daily transport for local people and a thrilling tourist ride. The model for this railway was an experimental electric hanging monorail built in 1897 by German engineer Carl Eugen Langen.
