

Snap away!

Until relatively recently, photography was reserved for special occasions, such as holidays and weddings, due to the cost and time involved in buying film and having it developed. Now we can take pictures all day long and we no longer even need a special camera—our cell phones do the job.

**Kodak No.3a,
made from
1903 to 1915**

Pocket camera

- **What?** Folding Pocket Kodak No.1
- **Who?** Eastman Kodak Co Ltd
- **Where and when?** US, 1897–1898

Pioneers in the camera business, Kodak produced ever smaller and cheaper models for the amateur photographer, including one of the first folding cameras. This was followed by an even smaller “vest pocket” camera in 1912.

Leica Standard, 1932

Press camera

- **What?** Speed Graphic
- **Who?** Graflex
- **Where and when?** US, 1912

A press camera shot pictures that were bigger than average, but the camera was still relatively compact and very easy to handle. It was used by press photographers and anybody that needed a reliable camera that could shoot pictures quickly.

Graflex Speed Graphic camera

35 mm camera

- **What?** Leica Standard
- **Who?** Oskar Barnack
- **Where and when?** Germany, 1932

In the first quarter of the 20th century, 35 mm (the width of the film) became the primary

Twin-lens reflex camera

- **What?** Rolleiflex K1
- **Who?** Franke & Heidecke
- **Where and when?** Germany, 1929

TLR (twin-lens reflex) cameras have two lenses, one to take the picture and one for viewing, as pictured above on the later 2.8 F model. A 45-degree mirror allows the user to view the shot from above, with the camera held at waist height. With this technique, the camera could also be held more steadily.

It is estimated that every two minutes we snap as many photos as the whole of humanity took in the entire 19th century.
