

BRIGHT LIGHTS

Since the invention of the light-emitting diode (LED) in 1962 and liquid crystal display (LCD) in 1964, many paper signs and billboards have been replaced by bright and colorful illuminated street and road signs, as seen here in Kowloon, Hong Kong. Now, smart digital billboards can detect the make, model, and year of oncoming vehicles and can use this information to project advertisements tailored to the vehicle's occupants.
