

POWER LOOM

The designer of the first power loom, Edmund Cartwright, was an English clergyman. He realized that the process of cloth making could be transformed using powered spinning machines. His first loom, built in 1785, was very crude but by 1787 he had improved it enough to start a weaving factory in Doncaster, UK. This engraving shows a busy factory in the 1830s.

A steam-powered belt drives the loom.

The finished cloth is wound onto a roller.

HYDRAULIC PRESS

Joseph Bramah was an inventor who made locks and enhanced the design of the toilet before turning his attention to improving the manufacturing process. His hydraulic press of 1795 operates by transferring pressure through liquids. It remains one of the most useful factory tools to this day, from making metal sheets to molding tablets for medical use.

BOTTLE-MAKING MACHINERY

American Michael Owens left school at 10 to become a glassblower. In 1903, he founded his own company to develop a bottle-making machine. His machines enabled standardized bottles to be mass-produced for the first time, supplying companies like Coca Cola.
