

Adulthood and old age

At about the age of 20, the body stops growing and we enter adulthood. But the adult body continues to change, and gradually signs of aging begin to appear.

In **middle age**, between the ages of 40 and 60, the first signs of aging appear. Many organs become less efficient, including bones that are weaker and muscles that are less powerful. The brain, however, often works better than ever.

Young adults between the ages of 20 and 40 are at the peak of fitness, health, and fertility (the ability to have children).
