

THE WEAPONS SYSTEMS

▲ 25MM CHAIN GUN

Fed ammunition by an electrically operated chain mechanism, two Mk38 guns provide defence against patrol boats or floating mines.

▲ 20MM ROTARY CANNON

The two Phalanx Close-In Weapons Systems use automated radar-controlled cannon to identify, track, and destroy incoming missiles.

▲ TORPEDO TUBES

There are two sets of Mk32 triple torpedo tubes. The torpedoes are fired using compressed air from a flask at the rear of the tubes.

◀ 5IN GUN

The Mk45 gun is designed for use against surface ships or aircraft, or for shore bombardment.
