

These bitter, white berries look like the eyes of a doll.

The purple, helmet-shaped flowers of this plant give it its other name, "Devil's Helmet."

Wolfsbane

The deadly sap of these leaves may cause a rash if touched.

Poisonous plants contain some of the most **deadly substances** in the world.

Pong pong

The fruit contains a poisonous seed—eating it can kill a human in two days.

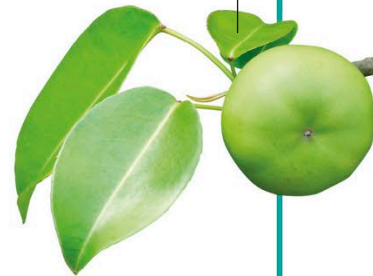

Oleander

The poisonous leaves are very bitter.

Castor oil plant

These dangerous leaves can cause blisters if touched.

Manchineel

Each spiny capsule has three beans inside.

The toxic leaves of this plant can kill within hours if eaten.

Yew

Harmless red berries hide poisonous seeds.

rubbed on arrows for hunting wolves, and during Roman times, it was commonly used for murdering enemies. Ricin, extracted from the **castor oil plant**, remains one of the most deadly poisons known today. Although all the plants shown here are toxic

to humans, some are harmless to animals. For example, birds can eat the berries of the **white baneberry** plant and **yew** without any ill effects. The birds then spread the seeds in their poo. Iguanas are known to feast on the fruit and leaves of the toxic **manchineel**.
