

PLANT KINGDOM

Flowering plants

Angiosperms, or flowering plants, make up more than 90 percent of all plants. They produce seeds that are protected by a hard casing.

Gymnosperms

Angiosperms

Monocots

Monocots have just one seed leaf, which grows into a new plant. They often have long, narrow leaves. Grasses, orchids, and palms are examples of monocots.

Orchids

Palms

Dicots

Dicots have two seed leaves, which appear together when a new plant starts to grow. They mostly have broad leaves. Dicots include daisies, roses, cacti, and legumes.
