

Plant index

In this book, plants are called by their “common names”—the names used in everyday life by ordinary people, and which can vary from country to country. However, when scientists around the world talk about a plant, to avoid confusion, they use its scientific name. This is based on an internationally recognized naming system and is in Latin. A plant’s scientific name is made up of two parts: the first is the genus, or group, of plants it comes from, and the second is the name of the specific species.
