

Flower forms

Flowering plants

Red powderpuff

Spherical

Red stamens make the flower look like a fluffy pompom.

Frangipani

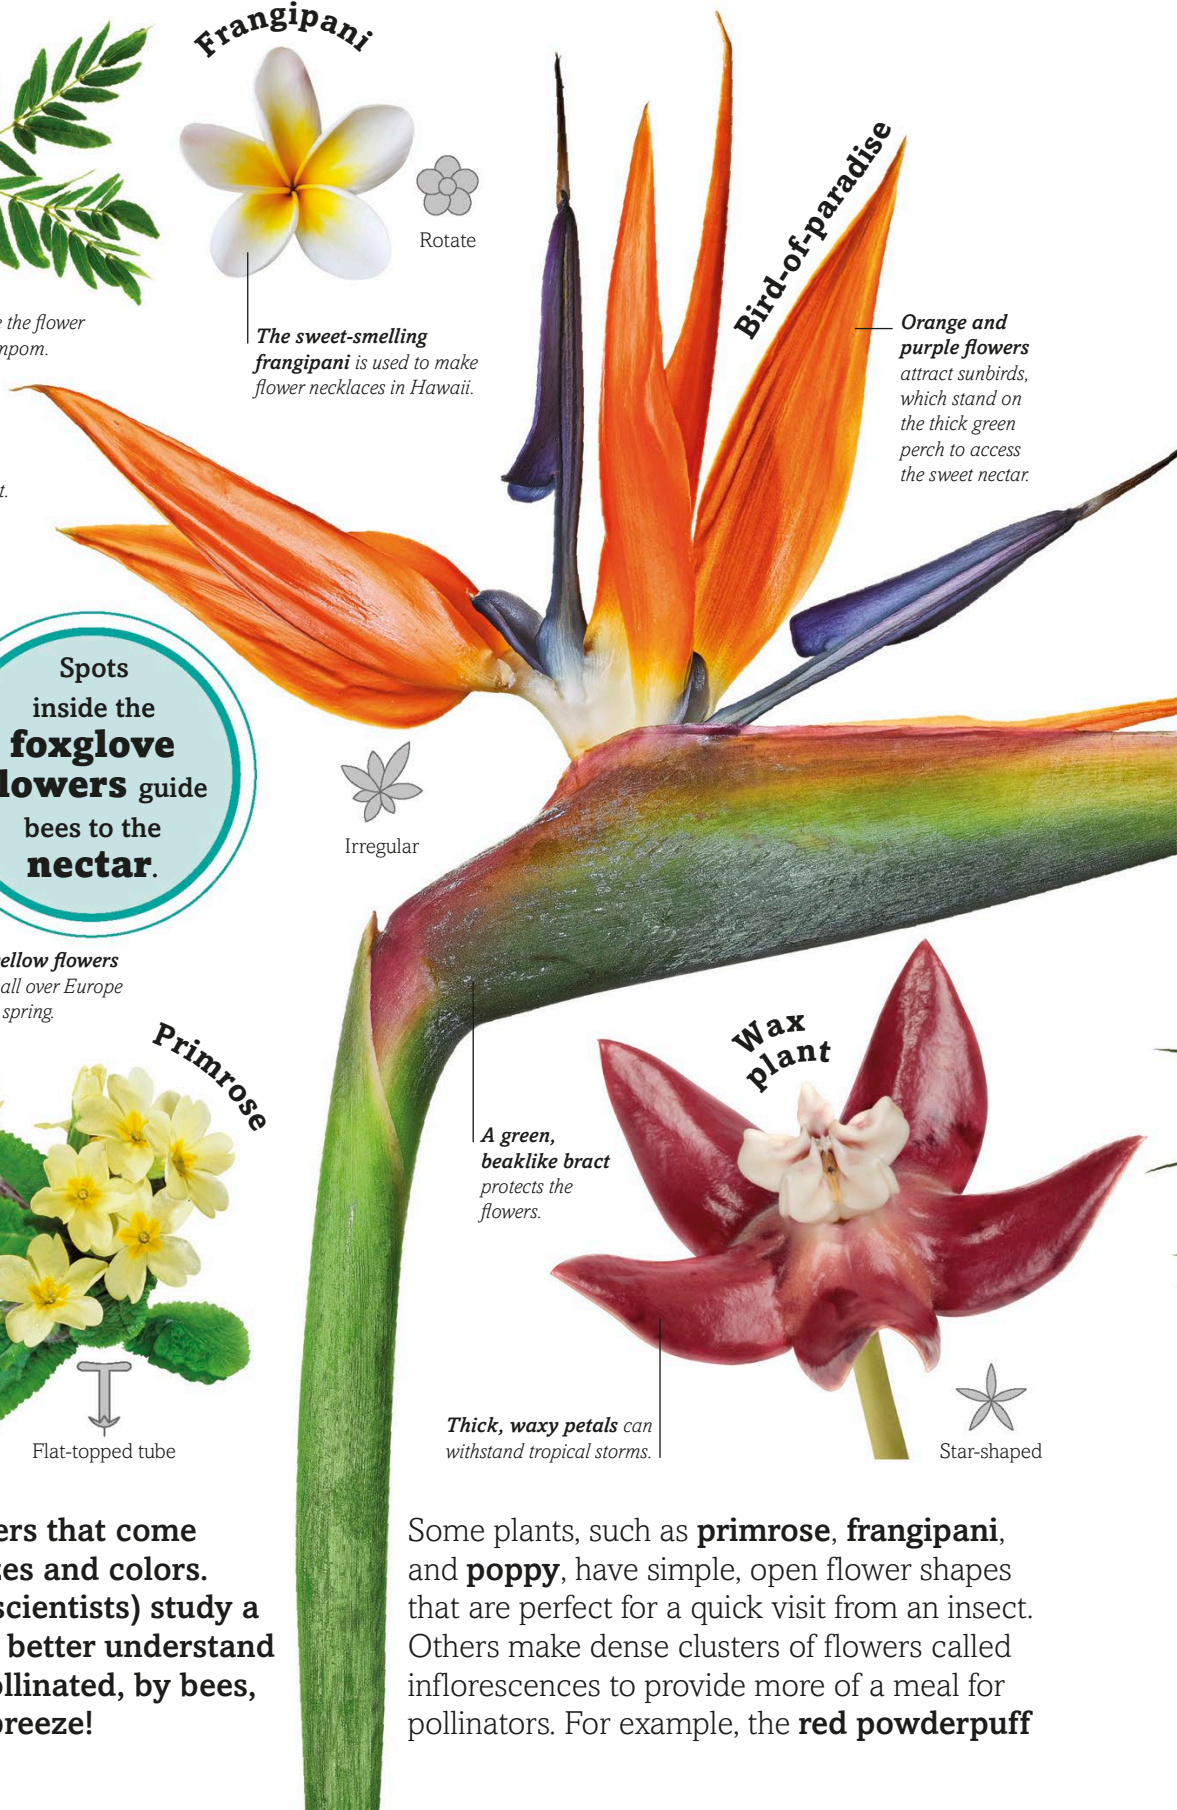

Rotate

The sweet-smelling frangipani is used to make flower necklaces in Hawaii.

Bird-of-paradise

Orange and purple flowers attract sunbirds, which stand on the thick green perch to access the sweet nectar.

Foxglove

The flower buds at the top open last.

Spots inside the foxglove flowers guide bees to the nectar.

Pale yellow flowers bloom all over Europe during spring.

Primrose

Bell-shaped

Flat-topped tube

Irregular

Wax plant

A green, beaklike bract protects the flowers.

Thick, waxy petals can withstand tropical storms.

Star-shaped

Plants have flowers that come in a variety of sizes and colors. Botanists (plant scientists) study a flower's shape to better understand how it may be pollinated, by bees, bats, birds, or a breeze!

Some plants, such as **primrose**, **frangipani**, and **poppy**, have simple, open flower shapes that are perfect for a quick visit from an insect. Others make dense clusters of flowers called inflorescences to provide more of a meal for pollinators. For example, the **red powderpuff**
