

The delicate flower has a lovely, sweet fragrance.

Pea-shaped

Sweet pea

A spike of tiny yellow flowers is surrounded by a white, petal-like bract.

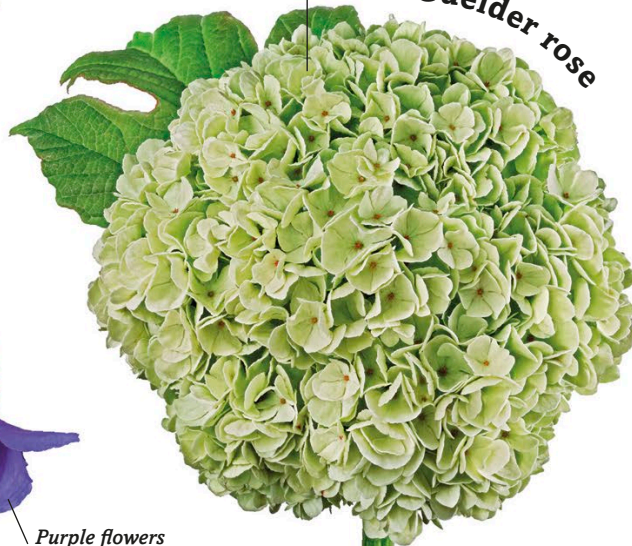

Small flowers on spike

Arum lily

Small flowers fill the center of these massive blooms, which can grow up to 12 in (30 cm) across.

Cream-colored flower spikes are up to 4 in (11 cm) across.

Guelder rose

Pink quill

Purple flowers grow from the edges of the pink bracts.

Funnel-shaped

The stem of the guelder rose is smooth, not thorny like a true rose plant.

King protea

Composite

Four large petals form a cup shape.

Poppy

Cup-shaped

A hairy bud protects the growing flower.

Saucer-shaped

Red hot poker

Tube-shaped

The petals change color from orange to yellow as they open.

makes a ball of tiny stamens to attract bees and butterflies, while the **king protea** and **red hot poker** coat the faces of visiting birds with a dusting of pollen when they feed. The **bird-of-paradise** also provides a feast for visiting birds, covering their feet with pollen

as they perch on the flower. Other plants make a special, often colorful, petal-like leaf called a bract, to attract many pollinators. Hummingbirds are drawn to the showy bracts of the **pink quill**, while the white bract of the **arum lily** attracts many insects.
