

A
bee orchid's
fragrance can
trick a male bee
into thinking it
is meeting a
female.

*These masses of pollen
stick to the bee's head, to be
transferred to the next flower.*

Bee orchid

*The pink sepals look
like wings, and the
flower even has a fuzzy,
"hairy" body like a bee.*

*The large, ruffled
petal of this
chocolate-scented
flower looks like a
dancer's gown.*

Dancing lady orchid

*The delicate white
petals resemble the
outstretched wings of
a heronlike white bird
called an egret.*

White egret flower

*The red leaflike bracts
attract hummingbirds
to pollinate the
flowers inside.*

Hot lips

*The duck's "head"
curls down over visiting
insects to deposit
pollen on them.*

Large duck orchid

*The labellum, or lip,
traps pollinating insects.*

male bees, attaching packages of pollen to them in the process. The **large duck orchid** looks more like a female sawfly than a duck to male sawflies, luring these pollinators. While many of these eye-catching plants are popular with gardeners, too great a market

demand can place a strain on rarer species. For this reason, the government of Thailand has banned the export of the rare **parrot flower** plant and its seeds to protect its dwindling numbers in the wild.
