

What's that smell?

When we think of flowers, we usually think of the colorful petals and sweet scents that attract pollinators such as bees or butterflies. But some plants smell truly terrible. Their stinking flowers, leaves, and roots attract a different set of pollinators, including flies and beetles.

Bradford pear

White blossoms smell like rotting fish to attract flies as pollinators.

Carrion flowers

can grow up to **16 in** (41 cm) across.

Carrion plant

The star-shaped, hairy flower looks like a dead animal.

Dragon arum

The flowers, which bloom in spring and summer, smell like rotting meat to draw in insects.

The flower spike may resemble an attractive pineapple but can smell awful.

Pineapple lily

This strange-looking flower traps insects until they are all covered in pollen.

Crown imperial

This plant's brightly colored blooms, leaves, and stem smell like foxes.

Jackal food

No Durian

Smelly durian is banned on public transportation in Singapore.
