

Floating giant

Titanic was truly vast. It had 10 decks and could carry up to 3,547 passengers and crew. It was 882½ ft (269 m) long—the length of 22 buses. When fully laden, it weighed 73,924 tons (67,063 metric tons).

Undersea resting place

Titanic's bow lies on the sea bed, partly buried in thick mud. About 2,000 ft (600 m) away, facing the opposite direction, lies the ship's stern (back end). Weighed down by flooded compartments, the bow broke off from the rest of the ship and sank first. Contents spilled out over a debris field measuring about ¾ sq mile (2 sq km).
