

1607

FOUNDING OF JAMESTOWN, VIRGINIA

Settlers sent by the Virginia Company of London established a fort on an inlet of Chesapeake Bay, naming it Jamestown for English King James I. Starvation and disease killed four-fifths of the early colonists, but enough survived to make it England's first durable settlement in North America.

things that had not been seen before..."

GALILEO GALILEI, LETTER TO DUCHESS CHRISTINA OF TUSCANY, 1615

1609-2021 DEVELOPMENT OF TELESCOPES

Since their invention in 17th-century Europe, telescopes have let astronomers see ever deeper into space, changing understanding of the universe.

1609 Galileo Galilei,
an Italian astronomer,
becomes the first to use
a telescope to observe
the planets.

1789 William Herschel,
a German-British astronomer,
builds a powerful telescope
that uses mirrors rather than
lenses to plot the stars.

1789 The Hooker telescope
at Mount Wilson in California
is used by Edwin Hubble to
explore and observe many
galaxies beyond our own.

**2021 The James Webb
Space Telescope**
detects radiation from
the most distant objects
in the universe.
