

More than 800,000 French Huguenots fled from persecution in Louis XIV's France

1685

EDICT OF NANTES REVOKED

In the 1680s, Louis XIV launched a campaign to eradicate Protestantism in France. The 1598 Edict of Nantes, guaranteeing the rights of the Huguenots (French Protestants), was revoked. Facing brutal mistreatment, Huguenots had to choose between forced conversion to Catholicism or emigration. Most left France, over 50,000 settling in England. The loss of their skills was a severe blow to the French economy.

1687

NEWTON'S PRINCIPIA MATHEMATICA

Published in 1687, Sir Isaac Newton's *Principia Mathematica* was a giant step forward in the understanding of the physical universe. It stated the Laws of Motion and recognized gravity as the force that both kept the planets in their orbits and made objects fall to the ground on Earth.

1687

PARTHENON RUINED

In 1687, Venice was fighting the Ottoman Empire for control of Greece. When Venetian forces attacked Athens, the city's Turkish garrison withdrew to the heights where the ancient temple of the Parthenon stood. Using artillery to bombard the Turkish position, the Venetians ignited an ammunition store, setting off an explosion that left the famous building in ruins.
