

Uses

Vulcanized rubber – made by heating sulfur with natural rubber – is weatherproof.

Vulcanized tyre

Preserved dried fruits

Some dried fruits are preserved using powder containing a sulfur compound.

When burned, sulfur in this candle drives away pests.

Sulfur candle

Creams that contain sulfur compounds can disinfect skin.

Skin cream

Lead acid battery

This battery contains strong sulfuric acid.

Penicillin pills

Some antibiotics contain sulfur compounds that kill harmful bacteria.

Sulfur acid rain damage

This limestone sculpture has been weathered by acid rain.

ACID RAIN

Sulfur dioxide gas produced by burning fuel dissolves in rain water, making a sulfur acid. This falls to the ground as acid rain.

Acid rain **destroys forests** by removing nutrients in the soil and in the leaves.

minerals, such as **celestine**. Many sulfur compounds smell bad. For example, the rotten-egg smell of volcanic pools is due to hydrogen sulfide gas. Other examples include **skunk** spray, the gaseous substance emitted by chopped **onions**, and the odour of the **titan arum**

flower. There are many uses for this non-metal. Its compounds can harden natural rubber for use in **tyres**, preserve **dried fruits**, and make strong **battery** acids. The element has anti-bacterial properties and is used in antibiotic medicine, such as **penicillin**.
