prevents bromine vapour
from escaping.

Potassium bromide

Pure bromine is
a red-brown liquid.

Bromine
is named after
the Greek word for
“**stench**”
because of its
strong smell.

Bromine is the only non-metal that is a liquid at room temperature. A thick vapour given off by this liquid is dangerous if breathed in. **Pure bromine** is never found in nature. Its compounds can easily mix in water, and are found dissolved in seawater

and extremely salty lakes, such as the **Dead Sea** in the Middle East. Solid bromine salts, including **potassium bromide**, collect as the water evaporates away, leaving behind crusts of white crystals. Bromine can then be extracted from the solid salts. A common
