Mn

Manganese

Forms

Transparent, rose-coloured crystal

Rhodochrosite

Manganese was **purified** from **pyrolusite** for the first time in 1774.

Shiny, silvery metal

Pyrolusite

This mineral is made of manganese dioxide.

Like magnesium, this element gets its name from the Greek region of **Magnesia**. There are many manganese minerals, including the colourful mineral **rhodochrosite**. The pure form of the metal is obtained mainly from the ore **pyrolusite**. **Pure manganese** is dense,

hard, and brittle. This element is present in seawater as the compounds manganese hydroxide and manganese oxide, which have built up in layers over millions of years to form masses on the sea bed. The human body needs a tiny amount of manganese, which we can get
