

7 **Fold the tail strip** in half lengthways and pin. Sew along one short end and along the long edge, leaving a 1cm ($\frac{1}{2}$ in) seam allowance. Leave the other short end unsewn so that you can turn the tail right side out.

8 **Using a long, thin, blunt tool**, such as the handle of a thin paintbrush or a chopstick, turn the tail to the right side and iron.

9 **With one of the body pieces** right side up, position the tail inside the top of the dart. Fold the body piece over, right side to right side, sandwiching the tail in between. Pin along the dart, making sure the tail is caught in place between the edges of the dart.

10 **Leaving a 5mm ($\frac{1}{4}$ in) seam allowance**, sew along the dart following the curve of the fabric. Forward- and reverse-stitch over the end of the tail a few times to make sure it is securely sewn in place and will not come out. This is the back of the mouse. Use the same method to sew up the dart on the other body piece to create the front of the mouse.
