

- 11 Place two arm pieces** right side to right side and pin. Leaving the straight edge unsewn, sew around the edges with a 5mm ($\frac{1}{4}$ in) seam allowance. Clip into the seam allowance, turn to the right side, iron, and lightly stuff the arm with toy filling. Leaving a 5mm ($\frac{1}{4}$ in) seam allowance, pin and sew the open end closed. Repeat for the second arm.

- 12 Lay the back of the mouse** right side up, with the tail tucked up towards the head. Pin one leg in place at the bottom of the back, as shown. Position the leg seam face down, so that when the leg is sewn in place, the seam will be at the back of the mouse. Leaving a 5mm ($\frac{1}{4}$ in) seam allowance, sew the edge of the leg to the body.

- 13 Repeat for the second leg**, then add the two arms. Both arms and legs will now be sewn to the back of the mouse. Tuck the arms and legs inwards, as shown.

- 14 Place the front of the mouse** right side down on top of the back of the mouse and the arms and legs. Align the edges and pin the front and back together, as shown. With a 1cm ($\frac{1}{2}$ in) seam allowance, sew around the pinned edges, leaving the straight edge unsewn.
