

- 12** With a safety pin on each end of the elastic, thread it through the casing, so that the ends with their safety pins are just out of sight inside the casing.

- 13** Topstitch across the casing over the seam where the back joins the crown on one side only: this will secure the elastic in place on that side of the bonnet.

- 14** Pull the other end of the elastic to gather the fabric at the back of the bonnet. Sew across the casing over the other seam where the back joins the crown to secure the elastic in place on this side of the bonnet, as in step 13. Each end of the elastic will still have a safety pin attached to it.

- 15** Pull on one of the safety pins to pull the end of the elastic out of the casing. Cut the elastic as short as you can. The remaining elastic will spring back into the casing and no longer be visible. Repeat on the other side of the bonnet.
