

6 Pin two mitt halves together right side to right side, aligning the edges. Set the machine to a wide zigzag with a normal stitch length and sew around the curved sides of the mitt, close to the edge. Leave the elasticated edge open. Repeat for the second mitt.

7 Trim the seam allowance to 5mm ($\frac{1}{4}$ in) and snip into the curve without cutting through the stitches, or use pinking shears to trim the seam allowance. Finally, turn the mitt right side out. Repeat steps 6 and 7 for the second mitt.

When working with a stretch fabric, it is important to make sure you do not pull on the fabric when either cutting or sewing it, as it will distort the shape.

**TOP
TIP**

A ballpoint needle prevents jersey fabric from tearing when you machine-sew it.
